To Whom It May Concern:

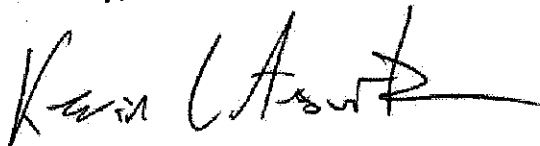

We would like to recommend Quality Electric and Controls, Inc. for future work with your organization. Quality Electric was one of six major subcontractors on our Central Utility Plant Expansion & Utility Tunnel Project at St. Mary's Hospital and Medical Center in Grand Junction, Colorado.

Quality Electric met every deadline, provided well trained and knowledgeable supervision, proficient manpower and responded timely to our needs and requests. Our project was trying at times due to the limitations imposed by working in an operating Hospital. Quality Electric effectively managed and scheduled their work and had an excellent rapport with our other subcontractors.

They would be an asset to any construction project and we would not hesitate employ them again.

If you have any questions please do not hesitate to contact me.

Sincerely,

Kevin L. Ainsworth, P.E.
Principal
